```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC The present invention relates to novel G protein-coupled receptors CC (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, CC 28, 31-38, 40, 41, 53-60) and their coding sequences. The present CC sequence is the coding sequence for one such G protein-coupled receptor. CC GPCRs are also known as seven transmembrane receptors and function in CC signal transduction. The nGPCRx coding sequences are useful for CC screening a human to diagnose a disorder affecting the brain or a genetic cerening a human to diagnose a disorder affecting the brain or a genetic confect in a sample is useful for treating schizophrenia. Detection of CC nGPCRx in a sample is useful for treating schizophrenia. Detection of CC disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CC GNS disorders, infections such as HIV-1, metabolic and cardiovascular CC diseases, proliferative disorders and hormonal disorders. Modulators of CC nGPCRx activity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention deficit-hyperactivity diseases, Parkinson's disease, migraine and senile dementia. Altheimer's disease, Parkinson's disease, migraine and senile dementia. CC disease), rheumatoid arthritis, autoimmune disorders, cancers, crespiratory ailments such as asthma, and inflammatory diseases e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                  The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides. The golypeptides are useful for identifying modulators of the polypeptides. The polypeptides are useful for identifying modulator compounds which function as modulators, activators, repressors, agonists or antagonists of the novel GPCR polypeptides including the GAL4 polypeptide. The antibodies and nucleic acid probes as described above can be used to detect the presence of the polypeptides and nucleic acids and are used to diagnose a variety of diseases or disorders in which GPCRs are involved e.g., Alzheimer's disease, amyottophic lateral sclerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, Crohn's disease, depression, epilepsy, macular degeneration, lymphoma, melanoma, cardiomyopathy, of arthritis, osteoporosis, Parkinson's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tuberculosis; cognition disorder; memory disorder; anorexia; hormonal release disorder; cardiovascular activity disorder; pain perception disorder; obesity; diabetes; obesity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alzheimer's disease; amyotrophic lateral sclerosis; asthma; atherosclerosis; basal cell carcinoma; breast carcinoma; cardiomyopathy; chondrosarcoma; chronic obstructive pulmonary disease; Crohn's disease; depression; epilepsy; macular degeneration; lymphoma; melanoma; multiple sclerosis; osteoarthritis; osteoporosis; Parkinson's disease;

The probes and antibodies are also useful for diagnosing cognition and memory disorders, anorexia, hormonal release disorders, cardiovascular activity disorders, pain perception disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) caused to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polynucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

```

The invention relates to an isolated polypeptide encoded by a CC nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. CC Also included are probes based on the GPCR sequences (including cthe GPCR sequence), a host cell comprising an expression vector comprising cthe GPCR sequence, antibodies raised against the polypeptides. The GPCR sequence of identifying modulators of the polypeptides. The cc and methods of identifying modulators of the polypeptides. The CC function as modulators, activators, repressors, agonists or antagonists of the novel GPCR polypeptides including the GAL4 polypeptide. The CC antibodies and nucleic acid probes as described above can be used to detect the presence of the polypeptides and nucleic acids and are used to CC diagnose a variety of diseases or disorders in which GPCRs are involved ce.g., Alzheimer's disease, amyotrophic lateral sclerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, CC chondrosarcoma, chronic obstructive pulmonary disease, Crohn's disease, amyotropic selections, pepilepsy, macular degeneration, lymphoma, melanoma, collitic contributes in the collitic sclitics of the collitic sclitics of the collitics and are the collitics. psoriasis, rheumatoid arthritis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disorders, anorexia, hormonal release disorders, cardiovascular activity disorders, pain perception disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GALA) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy. techniques. present sequence is above mentioned disorders by gene therapy a novel GPCR polynucleotide comprising 5

                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a human TGR-1 protein. The specification describes a method of screening a compound, which is capable of binding properties of neuromedin U to TGR-1. The method is useful for screening preventatives and remedies for hypertension, stress diseases, etc.. TGR-1 antagonists are also useful for treating the same diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying predicted or actual structures of two chemical or physical library by mass spectrometry correlating molecular mass measurements of two or shared chemical history .

The present sequence is a cDNA encoding hRUP6, an endogenous human corphan G protein-coupled receptor (GPCR). The full length hRUP6 cDNA was cloned by RT-PCR using human thymus cDNA as template.

The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in healthy and pathological states.

                                                                                                                                                                                                                                                                                                  The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. The receptor is useful for the investigation, diagnosis, treatment and prevention of diseases associated with GTP-binding protein-coupled receptors, including neurological, circulatory, digestive system, immune system, muscle and urinary system disorders. GTP-binding proteins are also known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1248 BP;

```
The invention relates to a human G protein-coupled receptor AXOR34 and the polynucleotide encoding it. The sequences of the invention are used for treating and/or a variety of diseases, including bacterial, fungal, protozoan and viral infections (particularly infections caused by HTV), pain, cancers, diabetes, obesity, anorexia, bulimia, Parkinson's disease, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders (including anxiety, schizophrenia, manic depression, depression, delirium, dementia and severe mental retardation) and dyskinesias (such as Huntington's disease and Gilles de la Tourette's syndrome). This sequence represents cDNA encoding the human AXOR34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    fungal infection; protozoan infection; viral infection; hypertension; parkin; diabetes; obesity; anorexia; bulimia; Parkinson's disease; stroke; acute heart failure; hypotension; urinary retention; osteoporosis; ulcer; angina pectoris; myocardial infarction; benign prostatic hypertrophy; allergy; migraine; vomiting; psychotic disorder; neurological disorder;
                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GB2363793-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dyskinesia; receptor.
